# The CT- technologies

★ Traditional CT	1972
★ High-resolutioanal CT	1985
★ Spiral CT	1989
★ Multispiral CT	1999

# The modern spiral computer tomograph

# Spiral computer tomography

**Continuous tube rotation**

**Continuous moving a table with the patient**

- High speed of research
- 3-D reformation
- CT-angiography
- Great opportunities of image processing

# The comparison TR and CT

<u>Parameters</u>		Traditional roentgenography	Computer tomography
Sensitivity	Brain tumor	≈ 10-20%	≈ 95%
	Lung cancer	≈ 60-80%	≈ 95%
Specificity	Brain tumor	≈ 1%	≈ 70%
	Lung cancer	≈ 70%	≈ 95%
Resolution		≈ 3 - 5 mm	≈ 1.0 mm
Ray's loading		≈ 0.5 mZv	≈ 5 mZv

# Methods of image transformation

- **Multiplanar Reformation, MPR**
- **Three-dimensional transformation  
(three dimensional rendering, 3-D)**
  - **Shaded Surface Display, SSD**
  - **Volume rendering**

# Summary

**The diagnostic opportunities of modern CT**

**Trauma  
Tumors  
Infection  
Anomalies  
Degenerative  
lesion  
Inflammation  
processes**

The throat cancer makes 1 - 4 %  
of all malignant tumors

Frequency of throat cancer  
through all malignant tumors of  
otolaryngological organs makes  
50 - 60 %

In oncological disease structure  
at men takes 5-th place

## Clinical symptoms of throat cancer are:

- ▲ hoarseness, continuous and increasing (87 % patients). It may be the first symptom
- ▲ breathing defeat, down to asphyxia - later symptom specifying slow narrowing by tumor
- ▲ bloody cough, a smell from a mouth (the tumor's disintegration), reduction of weight of a body
- ▲ painful swallowing an intoxication, change of mentality - latest symptoms of illness

Hard

# Throat cartilages structure

**In front**

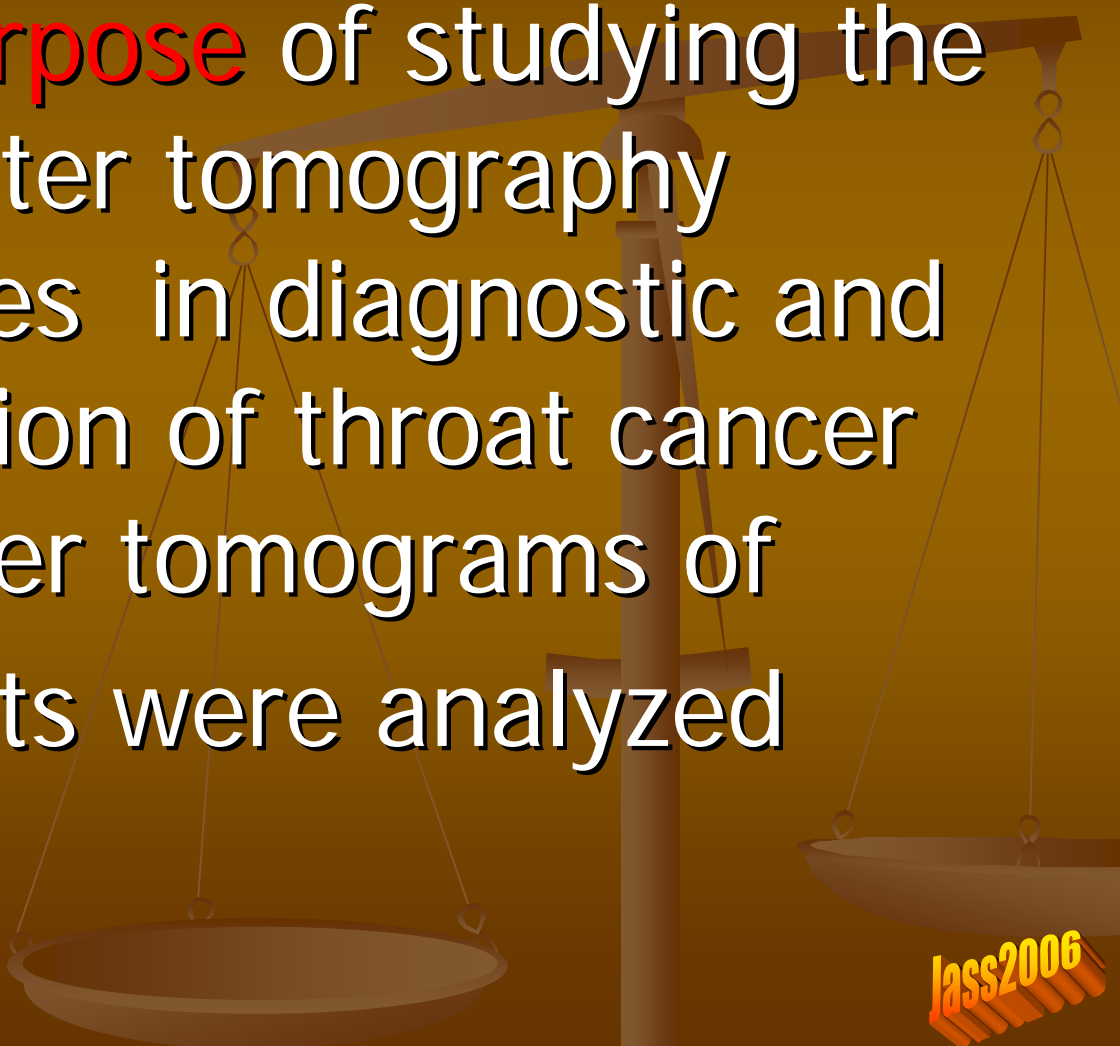

**Lateroview**

**Behind**

# Sagittal throat plane and ways of cancer distribution (→)

With the **purpose** of studying the computer tomography opportunities in diagnostic and an estimation of throat cancer computer tomograms of 45 patients were analyzed

# Parameters of throat scanning

- Prone patient's position on a back side
- Axial scanning parallel vocal cords
- Optimum layer thickness – 3 – 5mm
- Spiral step 1,5

# Normal throat CT (upper part)

Hypoglossal bone

Submaxillary salivary gland

Cervical vertebrae

Epiglottis

Spinal cord

The big horns of hypoglossal bone

The skin and hypodermic fat

Back group of neck muscles

Carotid artery

# Normal throat CT (middle part)

**Plate of thyroid cartilage**

**Vocal cords**

**Small throat cartilages**

# Normal throat CT (lower part)

Plate of thyroid cartilage

Small throat cartilages

# Distribution the throat cancer depending of patient's age

# Distribution the throat cancer depending of anatomical localization

# Distribution the throat cancer depending of disease stage

# Throat cancer (upper part)

Soft tissue  
increasing

Regional lymph  
nodes lesion

# Throat cancer

Volume increasing  
of right vocal cord

Perylaryngeal fatty  
tissue lesion

Lesion (calcinosis)  
of thyroid plate  
and small throat  
cartilages

# Lesion of soft neck tissues

# Throat cancer 68-years-old patient radiation therapy

before

half month later

# Throat cancer

Condition after operative and radiation treatment

# Throat cancer

Condition after operative and radiation treatment

Entering into patient's body  
the short-living isotopes

Scanning of radiation

Image  
reception and its  
analysis

~~PET + CT = ?~~  
= PET-CT

# PET-CT – the summary image of the “molecular” + X-ray tomography

?

# Throat cancer: combined PET-CT

?

# Conclusion

---

- CT allows to reveal presence of a tumor, its localization and the sizes
- CT would allow to estimate of fatty spaces condition and surrounding soft tissues
- CT would allow to estimate of cartilages lesion and presence of metastases in regional lymph nodes
- CT is necessary for definition of treatment tactics, volume of surgical intervention, a choice of radiotherapy fields
- PET-CT allows to reveal presence of tumoral growth, would serve for the control and estimation of efficiency radio- and chemotherapy
- PET-CT allows for the revealing remote metastasis

*Thanks for attention!*
